DETAILED ACTION

Allowable Subject Matter

1. Claims 1-17, are allowed

Regarding **claims 1, 4**, the present application teaches a method for communicating between first and second communication devices in a telephone connection for voice communication is directed to providing enhanced services in the form of "data object" (e.g. phone pages) that present content-enhancements to voice communication sessions. A calling A-party may request a data object such as a phonepage of a called B-party that provides a picture of the B-party and other information. Similarly, the called B-party may get a phonepage of the calling A-party and allows the calling A-party to control the distribution of his/her phonepages to called B-party. Particularly, the B-party does not have access to the A-party's phonepage unless the A-party has sought to access the B-party's phone page. Further the data objects or phonepages are accessed without using CLI (caller line identification, or caller ID) information as specifically subsidized on claims 1 & 4.

The closest prior art to the present application is Lund Patent Number 5,946,684 that teaches providing phonepages where a phonepage can be accessed by the called B-party using the CLI information provided by the calling A-party. Lund does not remotely teach that the called B-party has attempted to access the data objects or phonepages of the A-party'. This

conditional features that gives a calling party some control over the dissemination of his/her phonepage is absent from Lund.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
